## Abstract

Human civilization has always envisioned a multidirectional approach to make their life easy and sophisticated by creating machines which have a '*Functionality of Automation*' and if considered in this era, then it has progressed towards a unique feature which enables these machines to function for their given tasks as if they can process instructions similar to human thinking process for any work. This functionality is very much similar in nature to human '*Thought-Action*' mechanism but it differs on a greater aspect that human '*Thought-Action*' mechanism is based on '*Natural-Learning Process*' facilitated by inherent '*Intellect*' which is guided and driven by the '*Human Awareness*' known as the '*Consciousness*'. On the other hand, these so called '*Intelligent Machines*' don't have such independent natural mechanism as these machines totally depend on the human beings for their 'Input-Instructions' for their '*Logical Operations*' which deliver a kind of '*Output-Functions*' as the results somewhere close to a Human '*Thought-Action*' mechanism but not exactly the same for the reason that Human '*Thought-Action*' mechanism involves '*Feeling*', '*Thinking*', '*Willing*' in its functionality which is based on a specific '*Intention*' and this entire mechanism serves as the basis for the functionality of these machines which is more commonly known as 'Artificial-Intelligence' while the natural human intelligence phenomena is precisely known in the ancient Vedic literature as the '*Functionality of Intentionality*'.

Keywords: *Mind, Unification, Yoga, Artificial Intelligence, technology.*

# MIND-MATTER UNIFICATION: - A CORRELATED STUDY OF HUMAN NATURAL-INTELLIGENCE WITH HUMAN CREATED ARTIFICIAL-INTELLIGENCE TECHNOLOGY

## Introduction:

Today's modern technology of semiconductors is reaching to the heights of automation industrial revolution. This application of semiconductors is competing with the '*Human-Intelligence*' which is called '*Natural-Intelligence*' while that of semiconductors is so called '*Artificial-Intelligence*'.

'*Semiconductors*' use the '*pre-fed*', '*pre-designed*', '*logics*' to incorporate and implement their given instructions by the user or programmer to get done or achieve any given task to the semiconductors system. While in human beings, this task is achieved by the activities of neurons in the brain and nervous system which has the similar situation and functioning modalities with of the logical system that when incorporates and implements then performs a given task as a desire or wish of the user who is a particular human being or we can say the owner of that body having that brain and nervous system with a set of sensory processing system of inner senses and their sensory organs of activities.

Now there is a huge gap between these two intelligent systems wherein the semiconductors based system has to be given a learning criteria and order every time the work scenario and environment changes while in human beings system, this learning process is very natural and spontaneous with self adaptability and self automation in accordance with the work scenario and environmental

changes. This difference is marked as a gap between the two systems thereby giving their names as '*Artificial-Intelligence*' and '*Natural-Intelligence*'.

There is a unique third category of intelligent system is coming up which incorporates both these above described '*Intelligent-Systems*' in which of course the '*Artificial-Intelligence*' is designed by *Human* '*Natural-Intelligence*'.

This third type of hybrid intelligent system is called "*Mind -Matter Unification*" as "*Hybrid-Intelligence*". In this system, human natural intelligence can connect and communicate with the semiconductors artificial intelligence and operate with artificial intelligence systems without and semiconductors connecting systems rather a person can directly focus and command with brain signals as longitudinal magneto-dielectric waves as the so called "thought waves transference" to a semiconductors based artificial intelligence system to get accomplished any given task to be performed.

This Hybrid Intelligence can not only work at one to one line of sight contact of thought waves transference which is a local phenomenon as in physics, rather it can also function and work at great distances of millions of miles between human natural intelligence and semiconductors artificial intelligence and such a phenomenon is called a non-local phenomenon or "action at a distance".

In this case a human brain can exert any thought intentions through it and that longitudinal magneto-dielectric waves can travel know the dimension of Time thereby bypassing the dimension of Space, which is the property of these longitudinal dielectric waves and can travel any given distance with the speed 10 times faster than the light. So in a sense these waves are superluminal waves and because of their great speed, they appear as if they are present everywhere and hence they appear to be standing waves too as they connect every particle and every incident in the universe in the domain of Time.

These waves are the future of communication technology with hyper speed communication

at much larger and greater distances. These waves don't decay or lose their power over distances whole traveling for the reason of their property as superluminal and standing-wave nature; rather they multiply their power with the distance covered at the point of reception from the point of transmission.

These waves comprising the Hybrid Intelligence system can be the bridge between man and machine in future that all semiconductors based artificial intelligence systems with take their operational command and run just simply by the thought process of the user being the natural intelligence system owner.
